Examprom gcse biology answers

Scalars are quantities which have magnitude but not direction. You can multiply a vector by a scalar to produce another vector.

For **example**, multiplying vector $\mathbf{a}$ by **2** gives a vector twice the length of $\mathbf{a}$ and parallel to $\mathbf{a}$.

If $\mathbf{a} = \begin{pmatrix} 3 \\ 3 \end{pmatrix}$ then $2\mathbf{a} = 2\begin{pmatrix} 3 \\ 3 \end{pmatrix} = \begin{pmatrix} 6 \\ 6 \end{pmatrix}$

Photosynthesis

Green plants are able to make their own food from simple raw materials around them. This process is called _____.

Energy is needed for _____. This energy comes from _____. _____ is a substance that absorbs sunlight.

The light energy is able to _____ carbon dioxide and _____ into _____. The sugars are the plants _____. Oxygen is made as a _____ product.

This is the word equation for the reaction:

Carbon + _____ $\xrightarrow{\hspace{1cm}}$ Sugar + _____
dioxide

Transpiration in plants is affected by relative humidity.

a) How does increasing the relative humidity affect the rate of transpiration.

b) Explain why non-woody plants wilt if they receive less water than is lost through transpiration.

.....

.....

..... (3 marks)

c) List three **other** factors that affect the rate of transpiration
